Individual Project Report

Your Name:	Priyansh Mishra
Certificate:	Intelligent Reasoning System

1. ## Your personal contribution to the project.

   My personal contributions to the project included the building of the web scraper used for the collection of the names, addresses and reviews or comments by the parents given to each childcare. I was responsible for building a rough distance estimator between two postal codes as well. I, along with Mave's project system video contribution, also made the required video advertisement for the project video

2. ## What you have learnt from the project.

   This project has highly defined and advanced my knowledge of building models with interactive user interfaces as well as making sure of specific resource constraints such as memory or internet connectivity issues
   My main advancement would have to be the systematic way how the data was collected, cleaned and inferred as the models were made and deployed and debugged for better efficiency

3. ## How you can apply this in future work-related projects.

   This project has taught me a lot about how to incorporate different models into a web page. I can see a lot of future scope using this into many approaches
